

RONALD SIANIPAR

FULL STACK DEVELOPER

0813-8033-2065 • ronaldsianypar@gmail.com • South Tangerang , Indonesia

SUMMARY

Full Stack Developer with 5+ years of professional experience in web application development, backend engineering, server infrastructure, and production support. Experienced in developing and maintaining enterprise monolithic applications and contributing to backend services within microservice architectures. Strong hands-on experience across PHP, Python, JavaScript, Laravel, CodeIgniter, Vue.js/Nuxt.js, FastAPI, MySQL, MariaDB, PostgreSQL, AWS, Linux, Docker, Kubernetes, and CI/CD. Experienced in server administration, database management, REST API development, system integration, automation, deployment, and production troubleshooting.

Java	VB.NET

WORK EXPERIENCE

Dec 2023 - Current
JNE Tangerang

Full Stack Developer / PT JALA NIAGA ELOK

- Manage, maintain, and troubleshoot production servers and application infrastructure for multiple internal projects, covering both monolithic applications and microservices-based systems.
- Deploy and maintain application environments across Linux servers and cloud infrastructure, including Apache/Nginx, PHP, MySQL/MariaDB, Docker, and FTP Server.
- Support backend development and infrastructure for microservices-based applications, including E-Patrol, utilizing modern technologies such as Docker, Jenkins, and Kubernetes (K8s).
- Develop, maintain, and enhance internal business applications supporting logistics, billing, transaction processing, attendance, customer/member management, reporting, and operational processes.
- Develop full-stack applications using Laravel, CodeIgniter, PHP, JavaScript, jQuery, Vue/Nuxt, Bootstrap, MySQL, MariaDB, and PostgreSQL.

- Develop and maintain JPAR and related internal systems covering billing note processing, transaction management, reporting, agent/member management, promotional programs, and operational workflows.
- Design and maintain database structures, queries, indexes, transactions, data validation, and large-scale data processing while troubleshooting production database issues.
- Develop APIs and system integrations between internal applications and supporting services, including employee synchronization, CORS, SMTP/email, SharePoint, and data-processing services.
- Build automation and scheduled processes for employee synchronization, transaction processing, reporting, data processing, and other repetitive operational workflows.
- Implement complex business rules for member, agent, service, destination area, transaction, and promotional conditions within internal applications.
- Monitor and troubleshoot application, database, server, and network issues, including deadlocks, duplicate records, synchronization failures, service failures, connectivity issues, and production errors.
- Perform application deployment, server maintenance, scheduled-job management, log analysis, database monitoring, and production incident troubleshooting.
- Develop reporting and data-processing solutions, including Excel-to-database workflows, transaction processing, operational reporting, and automated data distribution.
- Collaborate with business and operational teams to analyze requirements, translate business processes into technical solutions, and deliver improvements to internal systems.

Oct 2021 - Dec 2023

Full Stack Developer / PT MITRA FESYEN GLOBAL

- Developed the company's main website.
- Developed microservice-based websites and applications for the company.
- Designed and developed databases to support company applications and systems.
- Performed website and database maintenance.
- Developed internal dashboards for multiple existing microservices.
- Set up and maintained servers using Ubuntu Server and CentOS.
- Managed cloud server environments.
- Converted Figma designs into responsive HTML interfaces.
- Created project plans and assisted with project planning.
- Implemented SEO improvements for company websites.
- Managed application updates and releases to the Google Play Store.
- Performed other development and technical support tasks as required.

Jun 2021 - Nov 2021

Full Stack Developer / MINISTRY OF FOREIGN AFFAIRS OF THE REPUBLIC OF INDONESIA

- Developed an internal Learning Management System (LMS) application named CETO (Center Online Education and Training).
- Designed use cases for the CETO application.
- Compiled and designed database structures for the application.

Aug 2021 - Sep 2021

Web Developer Intern / LENNA.AI

- Developed a multilingual feature for the main Lenna.ai website.
- Learned and applied Nuxt.js for web application development.
- Used GraphCMS to manage content for the main Lenna.ai website.
- Collaborated on projects using GitHub.
- Participated in online meetings and presented project progress to mentors.

Sep 2020 - Dec 2020

Web Developer Intern / CV IDS

- Developed a personal bio website using PHP Native.
- Developed a student data management project using Laravel, MySQL, and Bootstrap.
- Collaborated on projects using GitLab.
- Participated in online meetings and presented project progress to mentors.

EDUCATION

Jun 2026

INFORMATICS ENGINEERING
UNIVERSITAS PAMULANG

Jun 2021

SOFTWARE ENGINEERING
SMK WIKRAMA BOGOR

CERTIFICATIONS

Programmer Junior- BNSP, Cyber Security Training, Git Course with Progate, Python Course with Progate, 18 hours Back End Training with Progate, SOLID Programming Principles with Dicoding

PROJECTS

- **JPAR - JNE TANGERANG INTERNAL APPLICATION**

Internal enterprise application used to support logistics and operational processes, including billing, transaction processing, reporting, agent and member management, promotional programs, and other business workflows.

Highlights:

- Developed and maintained multiple business modules and operational workflows within the JPAR ecosystem.
- Developed billing note generation and transaction processing features.
- Developed agent and member management functionality.
- Developed operational, transaction, and Takuhaibin reporting features.

- Implemented promotional programs and complex business rules based on members, agents, services, destination areas, transaction conditions, and discount requirements.
- Developed and maintained supporting services for billing note processing, transaction processing, reporting, and other operational workflows.
- Designed and maintained database structures, queries, indexes, transactions, data validation, and large-scale data processing.
- Developed REST APIs and integrations between JPAR and supporting internal services.
- Implemented scheduled and automated processes for recurring operational workflows.
- Monitored and troubleshoot application, database, service, and production issues.
- Handled database-related issues including deadlocks, duplicate records, failed transactions, and data-processing errors.
- Performed application deployment, maintenance, log analysis, and production troubleshooting.

Technologies:

Laravel, PHP, JavaScript, jQuery, Bootstrap, DataTables, Select2, SweetAlert, MySQL, MariaDB, REST API, Linux, Apache/Nginx, Cron

- **E-PATROL**

Backend system developed as part of a microservice-based architecture for internal patrol and personnel management operations.

Highlights:

- Developed and maintained backend services for patrol and personnel-related processes.
- Developed REST API endpoints and backend business logic.
- Worked with personnel, location, and patrol-related data.
- Implemented database models and data access using SQLAlchemy.
- Managed database migration processes using Alembic.
- Supported containerized application environments.
- Supported Kubernetes-based production environments.
- Performed backend troubleshooting and production support.

Technologies:

Python, FastAPI, SQLAlchemy, Alembic, PostgreSQL, Docker, Kubernetes (K8s), Gunicorn, REST API, Linux

- **FREELANCE ATTENDANCE**

Internal attendance application developed to support attendance management for freelance employees.

Highlights:

- Developed an internal attendance management application.
- Designed and implemented database structures for attendance data.
- Developed backend and frontend functionality for attendance management.
- Implemented attendance-related business processes and validations.
- Maintained and enhanced existing application features.
- Performed application deployment and production maintenance.

- Troubleshoot application and database issues.

Technologies:

Laravel, PHP, JavaScript, jQuery, Bootstrap, MySQL, Linux, Apache/Nginx

- **CORS & EMPLOYEE SYNCHRONIZATION**

Internal service responsible for employee data synchronization between company systems and supporting applications.

Highlights:

- Developed and maintained employee data synchronization services.
- Implemented synchronization processes between internal systems.
- Developed supporting APIs for employee data integration.
- Monitored and troubleshoot synchronization failures and application errors.
- Troubleshoot database issues related to employee synchronization.
- Managed scheduled synchronization processes.
- Performed server installation, configuration, maintenance, and troubleshooting.
- Supported production operations and service monitoring.

Technologies:

PHP, Laravel, MySQL, MariaDB, REST API, CORS, Linux, Apache/Nginx, Cron

- **RPA & AUTOMATED DATA PROCESSING**

Internal automation solution developed to automate repetitive operational data-processing and distribution workflows.

Highlights:

- Developed automated daily data-processing workflows.
- Automated inbound and intracity operational data processing.
- Implemented scheduled processes for recurring operational tasks.
- Automated data distribution to SharePoint.
- Reduced repetitive manual data-processing activities through automation.
- Managed server-based scheduled execution and monitoring.

Technologies:

Python, Automation, Cron / Scheduled Jobs, SharePoint, Linux, Server-based Processing

- **SERVER & APPLICATION INFRASTRUCTURE**

Managed and maintained infrastructure supporting multiple internal applications and services across on-premise and cloud environments.

Highlights:

- Managed Linux-based production servers for internal applications and services.
- Deployed and maintained applications across on-premise and cloud environments.
- Configured and maintained Apache/Nginx web servers.
- Managed PHP and PHP-FPM application environments.

- Managed MySQL, MariaDB, and PostgreSQL database environments.
- Managed Docker-based application environments.
- Supported Kubernetes-based microservice deployments.
- Managed scheduled jobs, application logs, and server processes.
- Performed server monitoring, maintenance, troubleshooting, and incident handling.
- Supported application deployment and production environment management.

Technologies:

Linux, Ubuntu, CentOS, Apache, Nginx, PHP-FPM, MySQL, MariaDB, PostgreSQL, Docker, Kubernetes, Jenkins, SSH, DNS, HTTPS/SSL, Cron

- **MYFASHIONGROSIR**

<https://myfashiongrosir.com>

Main website of PT Mitra Fesyen Global, developed to introduce the company and its business activities.

Technologies:

Laravel, MySQL, PostgreSQL, Bootstrap, CI/CD, CentOS

- **MFG DROPSHIP**

<https://myfashiongrosir.com/dropship>

E-commerce platform designed for dropshippers who can sell products without maintaining their own inventory.

Technologies:

Laravel, MySQL, PostgreSQL, Bootstrap, CI/CD, CentOS

- **MFG WHOLESALE**

<https://myfashiongrosir.com/dropship>

Wholesale platform designed for resellers with a level-based pricing system and a minimum order of 4 pieces.

Technologies:

Laravel, MySQL, PostgreSQL, Bootstrap, CI/CD, CentOS

- **MFG CUSTOM**

<https://myfashiongrosir.com/custom>

Platform developed to make it easier for customers to create customized clothing according to their requirements.

Technologies:

HTML, CSS, Bootstrap, CI/CD, CentOS

- **MFG TEXTILE**

<https://myfashiongrosir.com/textile>

Platform developed for customers to purchase fabric with a minimum purchase requirement per roll and wholesale pricing.

Technologies:

Laravel, MySQL, PostgreSQL, Bootstrap, CI/CD, CentOS

- **KOKOIS.ORG**

<https://kokois.org>

Main website for Kokois, designed to introduce the company and provide a platform for several companies to develop together.

Technologies:

Laravel, Bootstrap, CI/CD, Ubuntu Server

- **RUANGNYAMAN**

<https://ruangnyaman.design>

Main website for RuangNyaman, developed to showcase and introduce their construction projects.

Technologies:

Laravel, MySQL, PostgreSQL, Bootstrap, CI/CD, Ubuntu Server

- **CLAN LIVING**

<https://clanliving.id>

Hotel website for Clan Living in Bali, featuring information about the hotel's properties and investment opportunities for customers.

Technologies:

Laravel, MySQL, PostgreSQL, Bootstrap, CI/CD, Ubuntu Server

- **MEGUMI WELLNESS**

<https://megumiwellness.com>

Website for Megumi Wellness in Bali, designed as a landing page to introduce the business, its massage services, and provide reservation access through WhatsApp.

Technologies:

Laravel, Bootstrap, CI/CD, Ubuntu Server

- **CETO — CENTER ONLINE EDUCATION AND TRAINING**

Internal Learning Management System developed for the Ministry of Foreign Affairs of the Republic of Indonesia.

The system was designed to support learning activities and online education within the organization.

Highlights:

- Internal LMS
- Use case design
- Database design and development

- **PPDB**

<https://github.com/ronaldsianipar/PPDB-2-Laravel>

New student registration system developed to support the student admission process.

Technologies:

Laravel, MySQL, Bootstrap

- **AGENDA KEGIATAN SISWA**

<https://github.com/ronaldsianipar/Agenda-Kegiatan-Siswa-PHP>

Student activity management system designed to organize students' daily activities and provide reports to the relevant teachers.

Technologies:

PHP Native, MySQL

- **CORONA VIRUS**

<https://github.com/ronaldsianipar/Corona-Virus>

Web-based project designed to analyze how much someone has contracted the Corona Virus.

Technologies:

PHP Native, MySQL

- **BUKU TAMU DIGITAL**

<https://github.com/ronaldsianipar/Buku-Tamu-Digital-Laravel>

Digital guest book application designed to record visitors and provide a platform for guests to submit criticism and suggestions.

Technologies:

Laravel, AdminLTE, MySQL

- **SERVERLESS SYSTEMS**

Developed and managed several serverless systems hosted across AWS and Rumahweb environments, using CentOS and Ubuntu as the underlying operating systems.

Systems:

- MYFASHIONGROSIR
- MFG DROPSHIP
- MFG WHOLESALE

- MFG CUSTOM
- MFG TEXTILE
- KOKOIS.ORG
- RUANGNYAMAN
- CLAN LIVING
- MEGUMI WELLNESS

Infrastructure:

AWS, Rumahweb, CentOS, Ubuntu, Serverless Architecture
